

## SPECIALTY SMALL PACKAGE FERTILIZERS

| DIRECTIONS FOR USE                                                                                                      |         |                 |
|-------------------------------------------------------------------------------------------------------------------------|---------|-----------------|
| Use on all Azaleas, Camellias, and Gardenias. After bloom drop, feed every 30-60 days.                                  |         |                 |
| Established Beds: Work 1 cup per plant lightly into soil surface and watering (soil) before watering.                   |         |                 |
| Transplanting Beds: Work 1 cup per 100 sq. ft. (10' x 10'). Work into soil thoroughly before transplanting.             |         |                 |
| CONTAINER GROWN PLANTS                                                                                                  |         |                 |
| Individual Plants: At planting, mix 1 teaspoon into soil and at the bottom of the transplant hole. Set plant and water. |         |                 |
| Gallon                                                                                                                  | 1       | 3               |
| Application Rate                                                                                                        | 1 Tbsp. | 2 Tbsp. 3 Tbsp. |

| DIRECTIONS FOR USE                                 |                                                                                                                 |
|----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| Outdoor flowers in containers, beds, and planters. | Mix one tablespoon per gallon. Repeat every 7 to 14 days during growing season. May be applied to foliage also. |
| Indoor potted plants.                              | Mix two teaspoons per gallon. Apply once per month in summer months and once every two months in winter.        |
| House and feeders.                                 | Mix in accordance with directions on box and feeder.                                                            |

| DIRECTIONS FOR USE                                                                                                                                                                                                                                     |                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| APPLICATION: Apply BLOOM MAX™ to dry soil in and around plants at recommended rates (see chart below). Repeat every 4 to 6 weeks. Water in thoroughly after application and ensure to wash off any fertilizer residue on plant leaves to avoid damage. |                        |
| APPLICATION CHART                                                                                                                                                                                                                                      |                        |
| TYPE OF PLANTS                                                                                                                                                                                                                                         | HOW MUCH TO APPLY      |
| When preparing a new planting bed.                                                                                                                                                                                                                     | 25 cups per 25 sq. ft. |
| Individual small plants: Bedding Plants, Perennials in 4 inch pots, Strawberries, Vegetable Transplants                                                                                                                                                | 1-1/2 cup per sq. ft.  |
| Shrub Rose: Rose in 2 gallon pot                                                                                                                                                                                                                       | 1-1/2 cup per rose     |
| Small transplant rosebush                                                                                                                                                                                                                              | 1 Tsp.                 |
| Large transplant rosebush                                                                                                                                                                                                                              | 1/4 cup per sq. ft.    |
| Ground Covers                                                                                                                                                                                                                                          | 1 cup per sq. ft.      |
|                                                                                                                                                                                                                                                        | 25 cups per 25 sq. ft. |

| DIRECTIONS FOR USE                                                                                                                                                                                                                                         |  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Use on Bougainvillea and flowering vines. Apply anytime.                                                                                                                                                                                                   |  |
| METHOD OF APPLICATION                                                                                                                                                                                                                                      |  |
| Individual Plants: At planting, mix the recommended amount of Bougainvillea Plant Food into the soil and at the bottom of the transplant hole. Set plant and water. Apply every 10-14 days until bloom, then every 3-4 weeks to maintain blooming process. |  |
| 1 Gallon - 1 Tbsp. • 2 Gallon - 2 Tbsp. • 5 Gallon - 5 Tbsp.<br>10" Bucket - 3 Tbsp. • 12" Bucket - 4 Tbsp.                                                                                                                                                |  |
